Sprint Review 1 - 16. October 2019

Get to know and learn the technologies

The team members got to know in the first 4 weeks the technologies, the project and their team members. This worked well and through different channels we shared interesting resources, so the group as a whole could profit from it.

Technologies

For the frontend, we are using **Angular Material** and for the backend we are using **Express**. Additionally, we use Asana Premium as a Project-Management tool and WhatsApp groups for communication for the frontend, the backend and the project as a whole.

Risks

All group members are busy elsewhere beside this lecture through work or other lectures. Because of this it is difficult to have regular team meetings. Our aim for the next weeks is to have productive meetings on Wednesdays, if necessary we have to have additional meetings, if problems cannot be solved through WhatsApp/Asana. Every team member should have a good understanding of the project.

Authentication and authorization

As this sprint is almost finished (Deadline 23. Oct), should be working on the following tasks.

Authentication & Authorization	5. October	23.1
Decide who frontend/who backend	Annina, Said, Kerrie: Frontend; Rafael, Julian: Backend	
Registration Page		x
Valid mail address		x
Passwords hashed		x
Difference service provider/customer		x
Integration of Admin		x
Admin should have access to all data		x
User should have own account		x
Password forgotten		x
Token		x
Nodemailer		x

We decided who should work on our frontend and who should work in the backend.
The Registration page is still in the making. The Login is almost working - the connection to the backend is not yet established. Password forgotten is implemented in backend. And also the token is implemented in backend. But has to be implemented in frontend. Nodemailer and Admin are not yet implemented. And also the difference between provider and customer is not visible yet.
These issues should be solved by the 23. October.

<u>Lessons Learned</u>

Take more time for the Sprint planning and forgive tasks directly after the meetings on Thursday so the team members can work earlier on their task.

Work more in teams so members and project can profit from synergy effects.

The biggest problem is probably that we all have different schedules and ESE is not the only lecture we take.
